ADITHYAN VALLOOR

Official name: Adithyan N B

Backend Developer | Node.js · TypeScript

Kerala, India · Portfolio · GitHub · LinkedIn · +919074482514

SUMMARY

Backend developer focused on Node.js, TypeScript and distributed systems. Designed, built and deployed a production real-time platform with a service-oriented architecture, event-driven messaging, gRPC inter-service communication, automated CI/CD and cloud infrastructure. Seeking backend engineering roles focused on Node.js, distributed systems and scalable backend architecture.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL

Backend: Node.js, Express, REST APIs, gRPC, Socket.IO, RabbitMQ

Architecture: Microservices, Modular Monoliths, Saga Pattern, Repository Pattern, Dependency Injection

Databases: PostgreSQL, MongoDB, Redis (Drizzle ORM, Mongoose)

Auth & Security: JWT access/refresh tokens, HTTP-only cookies, OTP verification

Infrastructure & DevOps: Docker, Docker Compose, Nginx, GitHub Actions (CI/CD), Google Cloud, Linux

Testing: Vitest (unit tests, mocks, stubs, spies)

Frontend: React, Next.js, Tailwind CSS

Soft Skills: Problem Solving, Ownership, Continuous Learning, Communication

PROJECTS

Melo — Real-Time Communication Platform

Node.js · TypeScript · Express · MongoDB · PostgreSQL · Redis · RabbitMQ · gRPC · Socket.IO · Docker · Nginx · GCP

Live: Melo | Source: GitHub

- Built and deployed a production real-time messaging platform supporting one-to-one chat, groups, reactions, mentions, file sharing and live presence.
- Architected a service-oriented backend in Node.js and TypeScript, separating authentication, user, messaging and group responsibilities into independent services.
- Implemented gRPC communication between services using Protocol Buffers, and RabbitMQ for asynchronous, event-driven workflows.
- Built a Saga-based account creation workflow with compensating actions to keep data consistent across MongoDB and PostgreSQL.
- Delivered real-time messaging with Socket.IO and Redis-backed presence tracking.
- Secured the platform with JWT access/refresh tokens, HTTP-only cookies and OTP verification.
- Applied the Repository Pattern and Dependency Injection to isolate business logic from persistence and make services testable; wrote unit tests with Vitest using mocks, stubs and spies.
- Containerized all services with Docker Compose, configured Nginx as a reverse proxy, and built a GitHub Actions CI/CD pipeline for automated tests, image builds and production deployment.
- Deployed to Google Cloud with HTTPS and a custom domain.

EDUCATION

Bachelor of Arts, Multimedia 2020 – 2023

Jawaharlal Nehru Institute of Arts and Science

Full-Stack Web Development Course 2024 – 2025

Entri Software Private Limited · Grade: A+
